- Javascript
- Framer Motion
- ReactJS
- Redux Toolkit
- Frameworks: Bootstrap, TailwindCSS

APART FROM MY FRONTEND SKILLS

- NodeJS
- ExpressJS
- MongoDB with Mongoose
- EJS, Pug
- Socket.io

LANGUAGES

- English: Good
- Nepali: Fluent
- Hindi: Fluent
- Bhojpuri: Fluent
- Maithli: Intermediate
- Bajhika: Fluent
- Tharu: Intermediate

PROFILE SUMMARY

Passionate Frontend Developer with strong expertise in building dynamic and responsive web applications. Skilled in creating portfolios, e-commerce platforms, and various web tools using modern frontend technologies. Successfully completed a 6-month tenure at a global tech company in Kathmandu, where I contributed to crafting custom designs and enhancing user experience. Proficient in translating design concepts into high-quality code, with a strong focus on performance, aesthetics, and functionality.

WORK EXPERIENCE

As Frontend Web Developer

I worked as a Frontend Web Developer at a global tech company in Kathmandu for around six months, where I was responsible for developing responsive websites, creating custom designs, and building various web tools and applications. During my time there, I closely collaborated with designers and backend teams to deliver high-quality user experiences and optimize web performance. Alongside my professional experience, I am also actively working as a freelance Frontend Developer, designing and developing custom websites and applications for clients across different industries.

PROJECTS

- OMSOK

Recently, I contributed to the development of an e-commerce website where I handled the entire frontend work. I was responsible for building responsive layouts, implementing modern UI/UX designs, optimizing performance, and ensuring a smooth and interactive user experience across all devices. I translated design mockups into clean, maintainable code and integrated dynamic elements to enhance functionality.

- E-SERVICE

I designed TaskRabbit website clone, building the entire frontend using React.js. I implemented a responsive and modern user interface, managed state efficiently using Redux Toolkit, and handled all data fetching and API integration seamlessly.

- MORE

In addition to my professional experience, I have independently developed a variety of frontend projects that showcase my versatility and technical skills. These include a personal portfolio website, a YouTube audio downloader supporting multiple kbps audio quality options, and a web application that retrieves GitHub user information without requiring a login and many more.
